

Fibonacci (Recursive) Benchmark: Clyte, GCC, and Clang

This benchmarking test evaluates the performance of the Fibonacci (Recursive) program across three C compilers: Clyte, GCC, and Clang. Each compiler was used to compile the same code, and the resulting binaries were executed five times to measure execution time.

Clyte Execution Times

Run	Execution Time (s)
1	0.00021
2	0.00020
3	0.00021
4	0.00018
5	0.00022

GCC Execution Times

Run	Execution Time (s)
1	0.00017
2	0.00015
3	0.00019
4	0.00018
5	0.00016

Clang Execution Times

Run	Execution Time (s)
1	0.00018
2	0.00023
3	0.00016
4	0.00017
5	0.00016

Summary

Compiler	Average Execution Time (s)
Clyte	0.00021
GCC	0.00017
Clang	0.00018
