

QuickSort Benchmark: Clyte, GCC, and Clang

This benchmarking test evaluates the performance of the QuickSort program across three C compilers: Clyte, GCC, and Clang. Each compiler was used to compile the same code, and the resulting binaries were executed five times to measure execution time.

Clyte Execution Times

Run	Execution Time (s)
1	0.00130
2	0.00125
3	0.00133
4	0.00131
5	0.00131

GCC Execution Times

Run	Execution Time (s)
1	0.00102
2	0.00110
3	0.00094
4	0.00091
5	0.00101

Clang Execution Times

Run	Execution Time (s)
1	0.00110
2	0.00112
3	0.00107
4	0.00111
5	0.00110

Summary

Compiler	Average Execution Time (s)
Clyte	0.00130
GCC	0.00100
Clang	0.00110
