

String Ops Benchmark: Clyte, GCC, and Clang

This benchmarking test evaluates the performance of the String Ops program across three C compilers: Clyte, GCC, and Clang. Each compiler was used to compile the same code, and the resulting binaries were executed five times to measure execution time.

Clyte Execution Times

Run	Execution Time (s)
1	0.00070
2	0.00071
3	0.00072
4	0.00065
5	0.00072

GCC Execution Times

Run	Execution Time (s)
1	0.00060
2	0.00063
3	0.00056
4	0.00061
5	0.00060

Clang Execution Times

Run	Execution Time (s)
1	0.00060
2	0.00058
3	0.00062
4	0.00056
5	0.00064

Summary

Compiler	Average Execution Time (s)
Clyte	0.00070
GCC	0.00060
Clang	0.00060
