

Memory and CPU Usage Benchmark – Small Test

This benchmark evaluates the memory and CPU usage of the `test\_small` program when compiled with three compilers: Clyte, GCC, and Clang. The results are based on 5 runs using `/usr/bin/time -v` and `perf stat`.

Clyte Results

Metric	Average Value
Avg User Time	0 s
Avg System Time	0 s
Avg RSS	1702.400 KB
Avg CPU Cycles	455442.400
Avg Instructions	286441.400
Avg Context Switches	0

GCC Results

Metric	Average Value
Avg User Time	.024 s
Avg System Time	.002 s
Avg RSS	19335.200 KB
Avg CPU Cycles	59538122.200
Avg Instructions	89857083.200
Avg Context Switches	0

Clang Results

Metric	Average Value
Avg User Time	.026 s
Avg System Time	.016 s
Avg RSS	82869.600 KB
Avg CPU Cycles	89454630.600
Avg Instructions	102966146.000
Avg Context Switches	0
