

Memory and CPU Usage Benchmark – Test Large

This benchmark evaluates the memory and CPU usage of the `test\_large` program when compiled with three compilers: Clyte, GCC, and Clang. The results are based on 5 runs using `/usr/bin/time -v` and `perf stat`.

Clyte Results

Metric	Average Value
Avg User Time	0 s
Avg System Time	0 s
Avg RSS	1759.200 KB
Avg CPU Cycles	872231.800
Avg Instructions	1258156.800
Avg Context Switches	0

GCC Results

Metric	Average Value
Avg User Time	.018 s
Avg System Time	.006 s
Avg RSS	20883.200 KB
Avg CPU Cycles	70744520.000
Avg Instructions	102138036.000
Avg Context Switches	0

Clang Results

Metric	Average Value
Avg User Time	.024 s
Avg System Time	.016 s
Avg RSS	84638.400 KB
Avg CPU Cycles	96263693.400
Avg Instructions	108308776.200
Avg Context Switches	0
